

IN THE CLAIMS

1. (currently amended) A hollow pipe made of several different materials by continuous extrusion, wherein ~~the~~ an innermost layer is a hollow plastic layer, ~~outside of which there is totally covered outside by~~ an inner ~~continuous~~-electrode layer, outside of which there is an electrically insulating layer, ~~outside of which there is totally covered outside by~~ an outer ~~continuous~~-electrode layer, the electrically insulating layer electrically separating the ~~continuous~~-electrode layers from each other and being thicker than either of the electrode layers.
2. (currently amended) A pipe according to claim 1 for conducting gas indoors, wherein the ~~continuous~~-electrode layers are connected electrically in such a way that the perforation of the ~~continuous~~-electrode layers brings about an alarm.
3. (currently amended) A pipe according to claim 1, wherein the ~~continuous~~-electrode layers are connected electrically in such way that a strain resulting from the loading of the pipe produces a warning signal.
4. (currently amended) In a pipe according to claim 1, wherein the pipe is used as a ventilation or a soil and waste pipe, the improvements comprising noise detecting means and counter-wave producing means, wherein the ~~continuous~~-electrode layers are connected electrically in such a way that the outer ~~continuous~~-electrode layer produces a sound that is opposite to a signal measured from inside the pipe so that a counter-wave produced in the outer ~~continuous~~-electrode layer muffles noise occurring inside the pipe.

5. (currently amended) In a hollow pipe, the improvements comprising a hollow innermost layer, ~~outside of which there is~~ totally covered outside by an inner ~~continuous~~-electrode layer, outside of which there is an electrically insulating layer, ~~outside of which there is~~ totally covered outside by an outer ~~continuous~~-electrode layer, wherein the innermost layer is plastic of continuous extrusion, the electrically insulating layer is foamed plastic, and the electrically insulating layer electrically separates the ~~continuous~~-electrode layers from each other.

6. (previously presented) A pipe according to claim 5, wherein the foamed plastic contains holes.

7. (previously presented) A pipe according to claim 5, wherein cells of the foamed plastic comprise a filler.

8. (previously presented) A pipe according to claim 6, wherein cells of the foamed plastic comprise a filler.

9. (currently amended) A pipe according to claim 5, wherein the ~~continuous~~-electrode layers are connected electrically in such a way that a perforation of the ~~continuous~~-electrode layers makes a short circuit.

10. (currently amended) A pipe according to claim 5, wherein the ~~continuous~~-electrode layers are connected electrically in such a way that a strain from loading of the pipe changes a potential difference between the ~~continuous~~-electrode layers.

11. (currently amended) A pipe according to claim 5, wherein the inner ~~continuous~~-electrode layer, the electrically insulating layer and the outer ~~continuous~~-electrode layer are formed simultaneously by continuous extrusion.
12. (previously presented) A pipe according to claim 11, wherein the foamed plastic contains holes.
13. (previously presented) A pipe according to claim 11, wherein cells of the foamed plastic comprise a filler.
14. (previously presented) A pipe according to claim 12, wherein cells of the foamed plastic comprise a filler.
15. (currently amended) A pipe according to claim 11, wherein the ~~continuous~~-electrode layers are connected electrically in such a way that a perforation of the ~~continuous~~-electrode layers makes a short circuit.
16. (currently amended) A pipe according to claim 11, wherein the ~~continuous~~-electrode layers are connected electrically in such a way that a strain from loading of at least one of the layers changes a potential difference between the ~~continuous~~-electrode layers.
